### Kayakiri - *Pseudorhynchus japonicus* - (Tettigoniidae family)

Distribution: Japan, Korea

Body size: 76 to 82 mm

The kayakiri is a large type of grasshopper, featuring either a pale green or dark brown body, with white patches from the head to the wing joints. The kayakiri can be found in areas with long grasses such as Japanese silver grass, and has a very loud chirp.

#### [Instructions]

Using the picture of the completed insect as a guide, fold along the mountain lines and valley lines to make your own insect.

----- Mountain fold

- - - - - Valley fold

——— Scissors line

——— Cut in line

**[Caution]** Remember to be very careful when using scissors.
